

Case Study

BIOHIT - INNOVATING FOR HEALTH

Operating throughout the world, Biohit develops, manufactures and markets liquid handling products and diagnostic test systems for use in research, health care and industrial laboratories.

Biohit's liquid handling business includes mechanical and electronic pipettors, whilst their diagnostic business focuses on products and analysis systems for the screening, prevention and diagnosis of diseases of the gastrointestinal tract.

Steve Ricketts
Operations Director

“With BVxL, I now have the ability to interrogate our Sage accounts data to a degree I could never previously do, and produce reports for our PLC parent company within the exacting timescales they require”.

With Headquarters in Finland, the requirement for financial reports to be completed within very tight timescales was proving problematic for the UK subsidiary. When Operations Director, Steve Ricketts, discussed this with Biohit's Accountants, they suggested BVxL as the solution.

“I was introduced to Blue Valleys Software after asking our accountants, Francis Clark, for guidance on how to get to data contained within our Sage accounting program, which I could not extract in the detail and format that I needed. After an initial consultation with Blue Valleys to establish my requirements, they introduced me to their BVxL software”

Blue Valleys worked closely with Biohit to develop a suite of reports using BVxL, so that every month, reports would update automatically, drawing directly from the live Sage data, through Excel.

For Steve, this now means no more long winded month-end re-keying in of data, saving valuable time and money. In addition, with BVxL offering full Excel functionality, this allows reports to be manipulated in any way required as well as allowing drill downs from any cells to see what transactions make up the balance in the cell.

BVxL—The Complete Data Delivery and Reporting Solution
